

Assignment 1:

There are individual books, readers, and authors that are present in the library data model.

1. Create a library database , as given below.

A minimal set of labels are as follows:

Book: This label includes all the books

Person: This label includes authors, translators, reviewers, Readers, Suppliers and so on

Publisher: This label includes the publishers of books in the database

A set of basic relationships are as follows:

PublishedBy: This relationship is used to specify that a book was published by a publisher

Votes: This relationship describes the relation between a user and a book, for example, how a book was rated by a user.

ReviewedBy : This relationship is used to specify that a book was reviewed and remarked by a user.

TranslatedBy: This relationship is used to specify that a book was translated to a language by a user.

IssuedBy: This relationship is used to specify that a book was issued by a user.

ReturnedBy: This relationship is used to specify that a book was returned by a user

Every book has the following properties:

Title: This is the title of the book in string format

Tags: This is an array of string tags useful for searching through the database based on topic, arguments,

geographic regions, languages, and so on

Status: the book status, specifying whether its issued or in library.

Condition: book condition, new or old

Cost: Cost of book

Type: book is a Novel, Journal, suspense thriller etc

Queries:

Library Database:

- a) List all people, who have issued a book “.....”
- b) Count the number of people who have read “....”
- c) Add a property “Number of books issued” to Mr. Joshi and set its value as the count
- d) List the names of publishers from pune city.

Neo4j Assignment 2.

Consider a Song database, with labels as

Artists, Song, Recording Company,

Recording Studio, Song Author etc.

Relationships can be as follows

Artist→[Performs]→Song →[Written by]→Song Author.

Song →[Recorded in] →Recording Studio →[managed by] →Recording Company

Recording Company →[Finances] →Song

You may add more labels and relationship and their properties, as per assumptions.

Song Database:

Queries:

- List the names of songs written by “.....”
- List the names of record companies who have financed for the song “....”
- List the names of artist performing the song “.....”
- Name the songs recorded by the studio “.....”
